Source records
invoices, POs, GRNs, vendors, approvals
1 Evidence extraction
(SQL join)
2 Deterministic controls
(code; every flag has c = 1)
3 Specialist agents
Math & approvals
Tax & identity
Vendor intelligence
4 Challenger / verifier
(LLM, then code grounding check)
5 Confidence-weighted risk scorer
(code)
6 Router
(code)
deterministic code
LLM stage
human decision
Policy store (versioned)
active policy text and clause thresholds, read at run time
Auto-approve
Sampled review
Human review
approve / reject / override / re-analyse
Audit trail and audit pack: rule -> evidence -> agent -> verifier -> reviewer -> outcome (one record per stage, per transaction)
